

Project 1 Data Cleaning – Change Log

Arashi Kaosara Abiodun

8th June 2026

This change log documents all data cleaning operations performed on Lagos Healthcare dataset. The dataset contained 10,000 records across 20 columns. All identified issues were resolved to produce a clean, analysis-ready dataset of 9,305 records.

Change ID	Description	Impact	Status
CR001	Removed 695 duplicate records	Reduced dataset from 10000 to 9305 rows	Resolved
CR002	Standardized Gender values (M, F, male, female replaced with Male/Female)	Consistent Gender entries across dataset.	Resolved
CR003	Fixed Admission Date formats to YYYY-MM-DD	Uniform date format across all records	Resolved
CR004	Standardized Smoking Status values (non-smoker, smoker, former smoker) variations with uniform values	Consistent Smoking Status entries across dataset	Resolved
CR005	Standardized Diagnosis and Admission Type columns	Consistent Diagnosis and Admission Type entries across dataset	Resolved
CR006	Standardized Admission Type values (emergency, ELECTIVE variations replaced with uniform Emergency/Elective/Urgent)	Consistent Admission Type entries across dataset	Resolved
CR007	Imputed missing categorical values with mode	No missing values in categorical columns	Resolved
CR008	Imputed missing Doctor ID column with unknown	No missing values in Doctor ID column	Resolved
CR009	Imputed missing numerical columns with median	No missing values in numerical columns	Resolved
CR010	Fixed invalid Systolic BP values (negative, zero and 999) replaced with median	Realistic BP range now 55-250	Resolved
